

ECOMIX FILTRATION

FILTRATION

INNOPURE[®]
Technology

ECOMIX responds to the needs for tank storage in small water volumes with a flow rate to 5m³/hr

OXYGENATION

Just like the SKIM, the ECOMIX ensures the oxygenation of the storage pond. Thanks to its gravity return, the ECOMIX favors the diffusion of the dissolved oxygen.

FILTRATION

Also characterized by pressure micro-bubbling with a flow rate of 5m³/hr, the ECOMIX removes all suspended matter up to micro-organisms (bacteria, etc.). They are trapped by the micro-bubbles generated by the water-air exchange. (specificity of the INNOPURE[®]) technology.

CONNECTION TO SEVERAL PONDS

Widely used for fish ponds, the ECOMIX can be connected to several ponds up to a given water volume.

MINIMUM MAINTENANCE

The ECOMIX is easy to maintain. In fact, since it has no filters, maintenance boils down to cleaning the plexiglass cone. No filter clogging is possible with the ECOMIX.

- Operation with an external pumping system
- Very light, easily displaceable
